

Benefits of Sheet Mulching

- It doesn't use chemicals to kill the lawn and it doesn't add waste to the landfill.
- The cardboard smothers the grass and decomposes over time, providing nutrients to the native soil.
- Beneficial organisms remain unharmed in the original top soil.
- The mulch and compost layer help retain moisture, meaning that you will have to water less.
- CA Native and drought-tolerant gardens provide more benefits for the surrounding ecosystem and need 1/10 the amount of water than a lawn requires.
